- Max scope of stopwatch is 23 hours 59 minutes and 39 seconds

● How to set up alarm time

● How to set up chime for hour and alarm switch

● Notes

- The button operation under water is not allowed when the watch carrier is swimming or diving.
- The product should be repaired at service center immediately once fog condensed or water drop is found inside the watch surface to prevent the water from corroding the electronic parts inside.
- It is necessary to avoid heavy shock to the watch (shockproof surges excluded). The electronic watch can stand common vibration but the heavy shock, incorrect application or dropping on a hard ground will cause serious damage to the watch.
- It is not allowed to clean the surface with chemicals or soap water and it is strongly recommended to use soft cloth dampened with water for cleaning, as it will corrode water proof rubber washer inside to cause water leakage.
- It is recommended not to bring it to a place with strong electric field and strong static RF environment.
- Power will be fast consumed if EL light liquid crystal is used for a long time.
- The EL light will not be so obviously observed under sun line.
- To elongate the service life, the EL light should not be pressed more than 3 times a day.
- The tolerance is ± 50 seconds at a normal temperature of -10°C — $+40^{\circ}\text{C}$ (Meeting international standard).
- The actual waterproof (30-50 meters) is subject to the real product.

● Guarantee card

One year of guarantee from the date of purchase is given to the product by the company. The product is guaranteed to be of normal operation and the company is responsible for the adjustment and repair free of charge for the failure of product.

(The card comes into effect upon signing and stamping by retailer)

Notes:

All the watches are subject to the operation test before delivery from the factory, therefore, the cell in your watch may have been normally consumed for a certain time at the day you purchase. As a sequence, the period of replacement may be shorter than the rated 3 years (in normal operation) for the cell originally provided.

Warnings: The liquid crystal electronic jumping movement of the watch uses the battery Type CR2025. Please do not use the other types of battery.

Guard against counterfeit: Please recognize **PADNEW** mark on the watch so as to guarantee the quality of watch. The watch produced by the original factory meets the Standards GB/T22780-2008 for Grade A requirements.
